Background Information

EAAT2 (also known as GLT-1), is encoded by SLC1A2 and is a glutamate transporter which can clear the majority of extracellular glutamate in brain and prevent brain seizures. Three isoforms of EAAT2 exist due to the alternative splicing. In addition to the 65-70 kDa monomer form, 130-150 kDa dimer of EAAT2 can also be observed on SDS-PAGE. (PMID: 22114258)
