For Research Use Only

Beclin 1 Monoclonal antibody Catalog Number:66665-1-lg Featured Product 99 Publications

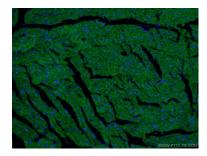

Basic Information	Catalog Number: 66665-1-lg	GenBank Accession No BC010276	umber:	Purification Method: Protein A purification
	Concentration:	GeneID (NCBI): 8678		CloneNo.: 1C10C4
	1500 µ g/ml Source: Mouse	UNIPROT ID: Q14457		Recommended Dilutions: WB 1:1000-1:5000
	Isotype: IgG1	Full Name: beclin 1, autophagy re	lated	IHC 1:250-1:1000 IF-P 1:50-1:500
	Immunogen Catalog Number: AG1843	Calculated MW: 52 kDa Observed MW: 52-60 kDa		
Applications	Tested Applications:		Positive Controls:	
	WB, IHC, IF-P, ELISA Cited Applications: WB, IHC, IF, IP, CoIP		WB : HeLa cells, HEK-293 cells, HepG2 cells, MCF-7 cells, LNCaP cells, Jurkat cells, HSC-T6 cells, NIH/3T cells, RAW 264.7 cells	
	Species Specificity:		IHC : human	stomach tissue,
	Human, Mouse, Rat IF-P : mouse heart tissue, Cited Species: human, mouse, rat, goat			heart tissue,
	Note-IHC: suggested antige TE buffer pH 9.0; (*) Alterno retrieval may be performed buffer pH 6.0	atively, antigen		
Background Information	Beclin 1, also known as ATG6 or VPS30, interacts with various cofactors (e.g. Ambra 1, Barkor (Atg14), Rubicon, or UVRAG) to regulate the lipid kinase Vps34 and promote the formation of the BECLIN1-Vps34-Vps15 complex, hence inducing autophagy. Its function (via the BH3 domain) is inhibited by Bcl-2 or Bcl-XL Beclin 1 (BECN1) is a crucial molecule in the control of the autophagic activity, and its activity is regulated by multiple mechanisms, including the post-translational modification, protein-protein interaction, and subcellular localization. It plays a role in crosstalk between apoptosis and autophagy. It has been reported that Beclin 1 can be cleaved into fragments of 50 37 and 35 kDa during apoptosis. It is involved in many disorders, including neurodegeneration and cancer (tumorigenesis). Beclin 1 is a mammalian tumor suppressor, and its gene is monoallelically deleted in 75% of ovarian, 50% of breast, and 40% of prostate cancers. Decreased expression of Beclin 1 has also been observed in human brain and lung tumors. The level of Beclin 1 was decreased in the affected brain regions of patients with Alzheimer's disease early in the disease process. Recent studies have also shown that gain and loss of Beclin 1 function affects the death of heart cells.			
	molecule in the control of the aut the post-translational modificatio crosstalk between apoptosis and 37 and 35 kDa during apoptosis. In (tumorigenesis). Beclin 1 is a mar ovarian, 50% of breast, and 40% human brain and lung tumors. The Alzheimer's disease early in the co	ophagic activity, and its ac on, protein-protein interacti autophagy. It has been rep is involved in many disor nmalian tumor suppressor, of prostate cancers. Decrea e level of Beclin 1 was decr lisease process. Recent stur	tivity is regula ion, and subcel orted that Becli ders, including , and its gene is sed expressior reased in the a	ted by multiple mechanisms, includir lular localization. It plays a role in in 1 can be cleaved into fragments of <u>9</u> neurodegeneration and cancer s monoallelically deleted in 75% of n of Beclin 1 has also been observed in ffected brain regions of patients with

Selected Validation Data

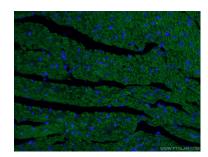

Various lysates were subjected to SDS PAGE followed by western blot with 66665-1-lg (Beclin 1 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffinembedded human stomach tissue slide using 66665-1-1g (Beclin 1 antibody) at dilution of 1:500 (under 10x lens).

Immunofluorescent analysis of (4% PFA) fixed mouse heart tissue using 66665-1-Ig (Beclin 1 antibody) at dilution of 1:100 and Alexa Fluor 488-Conjugated Goat Anti-Mouse IgG(H+L).

Immunofluorescent analysis of (4% PFA) fixed mouse heart tissue using 66665-1-Ig (Beclin 1 antibody) at dilution of 1:100 and Alexa Fluor 488-Conjugated Goat Anti-Mouse IgG(H+L).
