Background Information

Proteasome-associated protein NEDD8 ultimate buster 1 (NUB1) is an interferon-inducible protein that down-regulates NEDD8 expression and its conjugation system. Over-expression of NUB1 induces a growth-inhibitory effect in cells, and it mediates anti-proliferative actions and apoptosis in renal cell carcinoma cells through cell-cycle regulation. Expression of NUB1 leads to decreased modification of p53 with NEDD8 and stimulation of p53 ubiquitination. Recent finding revealed that NUB1, by regulating GSK3 β levels, modulates tau phosphorylation and aggregation, and is a key player in neurodegeneration associated with tau pathology.
