For Research Use Only

LC3A-Specific Polyclonal antibody

Catalog Number: 18722-1-AP

11 Publications

Basic Information

Catalog Number: 18722-1-AP Size:

1000 µg/ml
Source:
Rabbit
Isotype:

IgG

GenBank Accession Number:

NM_032514
GeneID (NCBI):
84557
UNIPROT ID:
Q9H492
Full Name:

microtubule-associated protein 1

light chain 3 alpha Calculated MW: 14 kDa Observed MW: 15-18 kDa Purification Method: Antigen affinity purification

Recommended Dilutions: WB 1:5000-1:50000 IHC 1:50-1:500 IF 1:10-1:100

Applications

Tested Applications: FC, IF, IHC, WB, ELISA Cited Applications: WB, IHC

Species Specificity: human, mouse, rat Cited Species:

human, rat, mouse, zebrafish

Note-IHC: suggested antigen retrieval with TE buffer pH 9.0; (*) Alternatively, antigen retrieval may be performed with citrate buffer pH 6.0

Positive Controls:

WB: mouse brain tissue, human brain tissue, rat brain

tissue

IHC: human breast cancer tissue,

IF: HepG2 cells,

Background Information

LC3A, also named as MAP1LC3A, LC3, MAP1ALC3 and MAP1BLC3, belongs to the MAP1 LC3 family. LC3A is one of the light chain subunits and can associate with either MAP1A or MAP1B which are microtubule-associated proteins that mediate the physical interactions between microtubules and components of the cytoskeleton. In cell biology, autophagy, or autophagocytosis, is a catabolic process involving the degradation of a cell's own components through the lysosomalmachinery. It is a major mechanism by which a starving cell reallocates nutrients from unnecessary processes to more-essential processes. Two forms of LC3, called LC3-I (17-19kd) and -II(14-16kd), were produced post-translationally in various cells. LC3-I is cytosolic, whereas LC3-II is membrane bound. The precursor molecule is cleaved by APG4B/ATG4B to form the cytosolic form, LC3-I. This is activated by APG7L/ATG7, transferred to ATG3 and conjugated to phospholipid to form the membrane-bound form, LC3-II. The amount of LC3-II is correlated with the extent of autophagosome formation. LC3-II is the first mammalian protein identified that specifically associates with autophagosome membranes. (PMID:11060023) MAP1LC3 has 3 isoforms MAP1LC3A, MAP1LC3B and MAP1LC3C. MAP1LC3A and MAP1LC3C are produced by the proteolytic cleavage after the conserved C-terminal Gly residue, like their rat counterpart, MAP1LC3B does not undergo C-terminal cleavage and exists in a single modified form.(PMID:12740394) This antibody is specific to LC3A.It recognize both LC3A-II and LC3A-II.

Storage

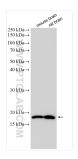

Storage

Store at -20°C. Stable for one year after shipment. Storage Buffer:

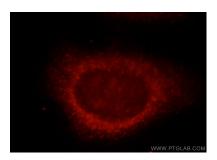

PBS with 0.02% sodium azide and 50% glycerol pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

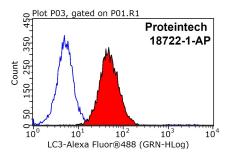

Various lysates were subjected to SDS PAGE followed by western blot with 18722-1-AP (LC 3A-Specific antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Immun of luorescent analysis of HepG2 cells, using MAP1LC3A antibody 18722-1-AP at 1:25 dilution and Rhodamine-labeled goat anti-rabbit lgG (red).

Immunohistochemical analysis of paraffinembedded human breast cancer tissue slide using 18722-1-AP (LC3A-Specific antibody) at dilution of 1:200 (under 10x lens. Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0.).

Immunohistochemical analysis of paraffinembedded human breast cancer tissue slide using 18722-1-AP (LC3A-Specific antibody) at dilution of 1:200 (under 40x lens. Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

1X10^6 HeLa cells were stained with 0.2ug LC3A-Specific antibody (18722-1-AP, red) and control antibody (blue). Fixed with 90% MeOH blocked with 3% BSA (30 min). Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) with dilution 1:1000.
