Background Information

Adenosine (ADO) is a retaliatory metabolite that is expressed in conditions of injury or stress. Its physiological functions are mediated through interaction with four specific transmembrane receptors called ADORA1, ADORA2A, ADORA2B, and ADORA3 (PMID:23994158). ADORA2A (adenosine A2A receptor) has been shown to dampen inflammatory responses. ADORA2A signaling has been discovered on polymorphonuclear neutrophils (PMNs) (PMID:36009485).
