Background Information

DCTN1, also named as DAP-150, p150-glued and p135, belongs to the dynactin 150 kDa subunit family. It is required for the cytoplasmic dynein-driven retrograde movement of vesicles and organelles along microtubules. Dynein-dynactin interaction is a key component of the mechanism of axonal transport of vesicles and organelles. Defects in DCTN1 are the cause of distal hereditary motor neuropathy type 7B (HMN7B). This antibody is specific to DCTN1.
