Background Information

Nestin, also named as NES and Nbla00170, is a class VI intermediate filament protein expressed in stem cells of the central nervous system (CNS) but not in mature CNS cells. Its expression is used extensively as a marker for neural lineage cells derived from human embryonic stem (hES) and induced pluripotent stem (iPS) cells. Nestin is also expressed in non-neural stem cell populations such as pancreatic islet progenitors and hematopoietic progenitors.

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed human kidney tissue using CoraLite® Plus 488 Nestin antibody (CL488-19483) at dilution of 1:200.

Neuronal cells derived from human dental pulp stem cells were fixed in 70% ethanol and blocked in 0.1% BSA in Staining Buffer, then stained with CoraLite® Plus 488-conjugated Nestin Polyclonal Antibody (CL488-19483) (1:200) (red) or unstained (blue). Image credit: @stemcell_art on Instagram
