Background Information

Human ATG16L1 is a 607 amino acid protein (~68 kDa) comprising three major domains: the N - terminal ATG5 binding domain (ATG5 - BD), the central coiled - coil domain (CCD) and a predicted C - terminal WD40 - domain. ATG16L1 α and β (Atg16L1 α , 63 kDa; and Atg16L1 β , 71 kDa) are the major isoforms expressed in intestinal epithelium and macrophages, and all isoforms encode exon 9, which contains Thr 300. Atg16L1 mediates the cellular degradative process of autophagy and is considered a critical regulator of inflammation based on its genetic association with inflammatory bowel disease. ATG16L1 has been implicated in Crohn's disease. (PMID: 24553140, PMID: 22740627, PMID: 28685931)
