# CoraLite® Plus 488-conjugated HA tag Polyclonal antibody 

Catalog Number:CL488-51064

| Basic Information | Catalog Number: | GenBank Accession Number: GeneID (NCBI): | Purification Method: |
| :---: | :---: | :---: | :---: |
|  | CL488-51064 |  | Antigen affinity purification |
|  | Size: | Full Name: <br> Calculated MW: <br> 1 kDa | Recommended Dilutions: |
|  | $1000 \mu \mathrm{~g} / \mathrm{ml}$ |  | IF 1:50-1:500 |
|  | Source: |  | Excitation/Emission maxima |
|  | Rabbit |  | wavelengths: |
|  | Isotype: |  | $493 \mathrm{~nm} / 522 \mathrm{~nm}$ |
|  | IgG |  |  |
| Applications | Tested Applications: IF/ICC | Positi | rols: |
|  |  | IF : Tr | d HEK-293 cells, |
|  | Species Specificity: |  |  |
|  | recombinant protein |  |  |

Protein tags are protein or peptide sequences located either on the C - or N - terminal of the target protein, which facilitates one or several of the following characteristics: solubility, detection, purification, localization and expression. The HA tag is corresponds to amino acid residues YPYDVPDYA of human influenza virus hemagglutinin(HA). Many recombinant proteins have been engineered to express the HA tag, which does not appear to interfere with the bioactivity or the biodistribution of the recombinant protein. This tag facilitates the detection, isolation, and purification of the proteins. The HA tag is useful in western blotting and immunohistochemical localization of expressed fusion proteins when examined with antibodies raised specifically against the HA-tag.

## Storage

Storage:
Store at $-20^{\circ} \mathrm{C}$. Avoid exposure to light. Stable for one year after shipment.
Storage Buffer:
PBS with $50 \%$ Glycerol, $0.05 \%$ Proclin300, $0.5 \%$ BSA, pH 7.3 .
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage

## Selected Validation Data

Immunofluorescent analysis of ( $-20^{\circ} \mathrm{C}$ Ethanol)
fixed Transfected HEK-293 cells using CoraLite®
Plus 488 HA tag antibody (CL488-51064) at dilution of $1: 200$.
