| Background Information | TXN, TRDX, TRX, TRX1, ADF and SASP, belongs to the thioredoxin family. It participates in various redox reactions through the reversible oxidation of its active center dithiol to a disulfide and catalyzes dithiol-disulfide exchange reactions. TXN plays a role in the reversible S-nitrosylation of cysteine residues in target proteins, and thereby contributes to the response to intracellular nitric oxide. Nitrosylates the active site Cys of CASP3 in response to nitric oxide (NO), and thereby inhibits caspase-3 activity. TKN induces the FOS/JUN AP-1 DNA-binding activity in ionizing radiation (IR) cells through its oxidation/reduction status and stimulates AP-1 transcriptional activity. |  |  |
| Storage | Storage: |  |  |
|  | Store at $-20^{\circ} \mathrm{C}$. Avoid exposure to light. Stable for one year after shipment. |  |  |
|  | Storage Buffer: |  |  |
|  | PBS with 50\% Glycerol, 0.05\% Proclin300, 0.5\% BSA, pH 7.3. |  |  |
|  | Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage |  |  |
