For Research Use Only

CoraLite® Plus 647-conjugated PARP1 Polyclonal antibody

Catalog Number: CL647-13371

Basic Information

Catalog Number: CL647-13371

1000 µg/ml

Source: Rabbit Isotype:

Immunogen Catalog Number:

AG4193

1014 aa, 113 kDa

Observed MW: 113-116 kDa, 89 kDa

Calculated MW:

GenBank Accession Number:

poly (ADP-ribose) polymerase 1

BC037545

GeneID (NCBI):

UNIPROT ID:

P09874 Full Name:

Purification Method:

Antigen affinity purification

Excitation/Emission maxima

wavelengths: 654 nm / 674 nm

Applications

Tested Applications:

FC (Intra)

Species Specificity:

human, mouse, rat

Background Information

PARP1 (poly(ADP-ribose) polymerase 1) is a nuclear enzyme catalyzing the poly(ADP-ribosyl)ation of many key proteins in vivo. The normal function of PARP1 is the routine repair of DNA damage. Activated by DNA strand breaks, the PARP1 is cleaved into an 85 to 89-kDa COOH-terminal fragment and a 24-kDa NH2-terminal peptide by caspases during the apoptotic process. The appearance of PARP fragments is commonly considered as an important biomarker of apoptosis. In addition to caspases, other proteases like calpains, cathepsins, granzymes and matrix metalloproteinases (MMPs) have also been reported to cleave PARP1 and gave rise to fragments ranging from 42-89-kDa. This antibody was generated against the C-terminal region of human PARP1 and it recognizes the fulllength as well as the cleavage of the PARP1.

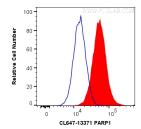

Storage

Store at -20°C. Avoid exposure to light. Stable for one year after shipment. Storage Buffer

PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

1X10^6 HeLa cells were intracellularly stained with 0.2 ug CoraLite® Plus 647 Anti-Human PARP1 (CL647-13371) (red), or 0.2 ug isotype control (blue). Cells were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011).
