Background Information

14-3-3 Sigma is a member 14-3-3 family of highly conserved proteins participating in diverse cellular processes including cell cycle progression. It is exclusively present in various epithelial cells, and alternatively named as human epithelial marker (HEM), or stratifin. Alteration of its expression has been linked to cancer.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 10622-1-AP (14-3-3 sigma antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 10622-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded mouse skin tissue slide using 10622-1-AP (14-3-3 sigma antibody) at dilution of 1:500 (under 40x lens). This data was developed using the same antibody clone with 10622-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded mouse skin tissue slide using 10622-1-AP (14-3-3 sigma antibody) at dilution of 1:500 (under 10x lens). This data was developed using the same antibody clone with 10622-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human Bowen disease slide using 10622-1-AP (14-3-3 Sigma antibody) at dilution of 1:2000 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 10622-1-PBS in a different storage buffer formulation.
