## Background Information

SCTR is a member of the family B G protein-coupled receptors. SCTR is a receptor for SCT, a gastrointestinal peptide hormone secreted by the S cells of the duodenum. SCT regulates water homeostasis throughout the body, and influences the environment of the duodenum by regulating SCT in the stomach and pancreas. Studies suggest that SCT can act as a neuropeptide within the central nervous system (CNS), thus SCTR may regulate the function of the CNS.
