Background Information

Human coenzyme Q4 (COQ4), as a component of the coenzyme Q biosynthetic pathway, is required for the oxidative decarboxylation of the C1 carbon of Coenzyme Q in eukaryotic cells (PMID: 38295803). COQ4 deficiency manifests as an early-onset neurodegenerative disorder. COQ4 encodes a ubiquitously expressed 265-amino-acid protein that is peripherally associated with the mitochondrial inner membrane on the matrix side (PMID: 25658047, 34656997)
