Background Information

LGR6 (Leucine-rich repeat-containing G-protein coupled receptor 6) is a seven-transmembrane protein. LGR6 is a high affinity receptor of R-spondins that potentiates the canonical Wnt signaling pathway and acts as a marker of multipotent stem cells in the epidermis. It potentially functions as a tumor suppressor. (PMID: 20223988; 20417836; 22615920)

Selected Validation Data

HUVEC cells were subjected to SDS PAGE followed by western blot with 17658-1-AP (LGR6 antibody) at dilution of 1:600 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 17658-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human testis tissue slide using 17658-1-AP (LGR6 Antibody) at dilution of 1:200 (under 10x lens). This data was developed using the same antibody clone with 17658-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human testis tissue slide using 17658-1-AP (LGR6 Antibody) at dilution of 1:200 (under 40x lens). This data was developed using the same antibody clone with 17658-1-PBS in a different storage buffer formulation.
