Background Information

Solute carrier family 7 member 2 (SLC7A2), also known as CAT2, is a member of the solute carrier superfamily. It functions as a cationic amino acid transporter, which can transport cationic amino acids (arginine, lysine and ornithine) into the cytosol and regulate inflammation (PMID: 35152203). It has been shown that lower SLC7A2 expression is associated with worse prognosis of ovarian cancer and hepatocellular carcinoma (PMID: 34108444; 32647070), and SLC7A2 deficiency in inflammatory bowel tissues increases the risk of inflammation-associated colon tumorigenesis (PMID: 30202097)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 30232-1-AP (SLC7A2 antibody) at dilution of 1:800 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 30232-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human stomach cancer tissue slide using 30232-1-AP (SLC7A2 antibody) at dilution of 1:160 (under 20x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 30232-1-PBS in a different storage buffer formulation.
