HA tag Polyclonal antibody Catalog Number:51064-2-AP 933 Publications

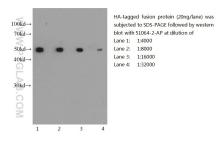

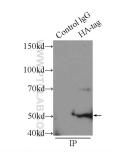

Basic Information	Catalog Number: 51064-2-AP	GenBank Accession Number: GeneID (NCBI):		Purification Method: Antigen affinity purification	
	Concentration: 650 ug/ml	Full Name: Calculated MW: 1 kDa		Recommended Dilutions: WB 1:5000-1:10000	
	Source: Rabbit		•.	IP 0.5-4.0 ug for 1.0-3.0 mg of total protein lysate IF/ICC 1:10-1:100	
	Isotype: IgG			177CC 1.10-1.100	
Applications	Tested Applications: WB, IF/ICC, FC (Intra), IP, ELISA	Positive Co			
	Cited Applications:			WB : recombinant protein, Transfected HEK-293 cells IP : Transfected HEK-293 cells, IF/ICC : Transfected HEK-293 cells,	
	WB, IHC, IF, IP, CoIP, ChIP, ELISA	CoIP, ChIP, ELISA city: IF/ICC : Tr			
	Species Specificity: recombinant protein			ansiected HER-295 cells,	
	Cited Species: human, mouse, pig				
	Protein tags are protein or peptide sequences located either on the C- or N- terminal of the target protein, which facilitates one or several of the following characteristics: solubility, detection, purification, localization and expression. The HA tag is corresponds to amino acid residues YPYDVPDYA of human influenza virus hemagglutinin(HA). Many recombinant proteins have been engineered to express the HA tag, which does not appear to interfere with the bioactivity or the biodistribution of the recombinant protein. This tag facilitates the detection, isolation, and purification of the proteins. The HA tag is useful in western blotting and immunohistochemical localization of expressed fusion proteins when examined with antibodies raised specifically against the HA-tag.				
Background Information	facilitates one or several of the fol expression. The HA tag is correspo hemagglutinin(HA). Many recombi to interfere with the bioactivity or isolation, and purification of the pu	lowing characteris nds to amino acid inant proteins hav the biodistribution roteins. The HA tag	stics: solubility, dete residues YPYDVPDY, e been engineered t n of the recombinant g is useful in westerr	ection, purification, localization and A of human influenza virus o express the HA tag, which does not appe : protein. Selected Validation Data

Western blot of HA-tagged fusion protein with anti-HA-tag (51064-2-AP) at various dilutions.

IP result of anti-HA tag (IP:51064-2-AP, 3ug; Detection:51064-2-AP 1:2000) with Transfected HEK-293 cells lysate 500ug.

Transfected HEK-293 cells were subjected to SDS PAGE followed by western blot with 51064-2-AP (HA tag antibody at dilution of 1:3000 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of Transfected HEK-293 cells using 51064-2-AP (HA tag antibody) at dilution of 1:25 and Alexa Fluor 488-conjugated AffiniPure Goat Anti-Rabbit IgG(H+L). 1x10^6 Transfected HEK-293 cells were intracellularly stained with 0.25 ug HA tag Polyclonal antibody (51064-2-AP) and Coralite@488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2), and 0.25 ug Isotype Control. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
