Background Information

GATA1 is first identified as a member of the GATA transcription factor family, whose members bind the consensus $(WGATAR)\ binding\ motif\ [PMID:22937757].\ GATA1,\ a\ zinc\ finger\ DNA-binding\ transcription\ factor,\ plays\ a\ critical$ role in the normal development of hematopoietic cell lineages. The protein contains an N-terminal region that confers transcriptional activity and a C-terminal domain that mediates binding to DNA and other factors [PMID: 8524811]. GATA-1 is also implicated in regulating the expression of the erythroid and megakaryocytic-specific genes [PMID:22937757].

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 60011-1-lg (GATA1 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 60011-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human breast hyperplasia tissue slide using 60011-1-lg (GATA1 antibody) at dilution of 1:800 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60011-1-PBS in a different storage buffer formulation.
