Background Information

HDGF, also named as HMG1L2, belongs to the HDGF family. It is a heparin-binding protein, with mitogenic activity for fibroblasts. HDGF acts as a transcriptional repressor. It plays important roles in the development and progression of cancers. HDGF may have a synergistic effect with VEGF during cancer development and Progression.

Selected Validation Data

SMMC-7721 cells were subjected to SDS PAGE followed by western blot with 60064-1-lg (HDGF Antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 60064-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human liver cancer tissue slide using 60064-1-lg (HDGF Antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60064-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffinembedded human liver cancer tissue slide using 60064-1-Ig (HDGF Antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 60064-1-PBS in a different storage buffer formulation.
