Background Information

Fc epsilon Receptor I alpha (FcεR1α) is a single-pass type I membrane protein which contains 2 immunoglobulin-like domains. FcεR1α forms a tetrameric complex with one beta and two gamma subunits (PMID: 19406478). FcεR1 is the high-affinity receptor for the Fc region of immunoglobulin E (IgE) (PMID: 1532373). It is expressed on mast cells and basophils and plays a central role in the allergic response (PMID: 2148316).
