|  | WB,Indirect ELISA,IF |
|  | Species Specificity: |
| human |  |

| Background Information | The first component of complement, C 1 , is a calcium-dependent complex of the 3 subcomponents $\mathrm{C} 1 \mathrm{q}, \mathrm{C} 1$ r, and C 1 s. C1q is composed of 18 polypeptide chains: six A-chains, six B-chains, and six C-chains. Each chain contains a collagen-like region located near the N terminus and a C -terminal globular region. Deficiency of C 1 q has been associated with lupus erythematosus and glomerulonephritis. This antibody is raised against $\mathrm{C} 1 q \mathrm{C}$ which is the C chain polypeptide of human complement subcomponent C1q. |

Storage Storage:
Store at $-80^{\circ} \mathrm{C}$.
Storage Buffer:
PBS Only

Selected Validation Data

human plasma were subjected to SDS PAGE
followed by western blot with $66268-1-\lg$ (C1OC
Antibody) at dilution of 1:2000 incubated at room
temperature for 1.5 hours. This data was developed using the same antibody clone with $66268-1-P B S$ in a different storage buffer formulation.

Immunofluorescent analysis of ( $-20^{\circ} \mathrm{C}$ Methanol) fixed HUVEC cells using C1qC antibody (66268-1 Ig, Clone: 1C5B4) at dilution of 1:800 and
CoraLite®488-Conjugated AffiniPure Goat Anti-
Mouse $\operatorname{lgG}(\mathrm{H}+\mathrm{L})$. This data was developed using the same antibody clone with 66268-1-PBS in a different storage buffer formulation.
