## Background Information

Chloride channels are a diverse group of proteins that regulate fundamental cellular processes including stabilization of cell membrane potential, transepithelial transport, maintenance of intracellular pH, and regulation of cell volume. CLIC4 is a p53- and tumor necrosis factor alpha-regulated cytoplasmic and mitochondrial protein that belongs to the CLIC family of intracellular chloride channels. CLICs have actions distinct from traditional cell membrane chloride channels, including formation of ion channels in intracellular organelles and roles in membrane trafficking, apoptosis, and cell differentiation.

## Selected Validation Data

WB result of CLIC4 antibody (66343-1-Ig; 1:10000; incubated at room temperature for 1.5 hours) with sh-Control and sh-CLIC4 transfected HeLa cells. This data was developed using the same antibody clone with 66343-1-PBS in a different storage buffer formulation.

Various lysates were subjected to SDS PAGE followed by western blot with 66343-1-Ig (CLIC4 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 66343-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human heart tissue slide using 66343-1-Ig (CLIC4 Antibody) at dilution of 1:200 (under 10x lens). This data was developed using the same antibody clone with 66343-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human heart tissue slide using 66343-1-Ig (CLIC4 Antibody) at dilution of 1:200 (under 40x lens). This data was developed using the same antibody clone with 66343-1-PBS in a different storage buffer formulation.
