For Research Use Only

ATF5 Monoclonal antibody, PBS Only

Catalog Number: 67066-1-PBS

Purification Method:

Protein A purification

CloneNo.:

1E5B6

Basic Information

Catalog Number:

67066-1-PBS

 Size:
 GeneID (NCBI):

 1 mg/ml
 22809

 Source:
 UNIPROT ID:

 Mouse
 Q9Y2D1

Isotype: Full Name:
IgG2b activating transcription factor 5

Immunogen Catalog Number: Calculated MW:

AG7214 31 kDa

Observed MW: 30-35 kDa

BC005174

GenBank Accession Number:

Applications

Tested Applications: WB,Indirect ELISA Species Specificity:

Human

Background Information

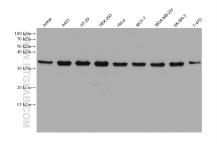

ATF5, also named as Activating transcription factor 5, is a 282 amino acid protein, which belongs to the bZIP family. ATF5 is Widely expressed with higher expression levels in liver. ATF5 is actively transported to the centrosome and accumulated in the pericentriolar material (PCM) during G1 to M phase via a microtubule-dependent mechanism. During late telophase and cytokinesis, it translocates from the centrosome to the midbody (PMID: 26213385). ATF5 as a transcription factor that either stimulates or represses gene transcription through binding of different DNA regulatory elements such as cAMP response element (CRE) (consensus: 5'-GTGACT[AC][AG]-3'), ATF5-specific response element (ARE) (consensus: 5'-C[CT]TCT[CT]CCTT[AT]-3') but also the amino acid response element (AARE), present in many viral and cellular promoters. Critically ATF5 is involved, often in a cell type-dependent manner, in cell survival, proliferation, and differentiation (PubMed:10373550, PubMed:15358120, PubMed:21212266, PubMed:20654631).

Storage

Storage:

Store at -80°C. Storage Buffer: PBS Only

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 67066-1-lg (ATF5 antibody) at dilution of 1:8000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 67066-1-PBS in a different storage buffer formulation.
