## Background Information

ARL8A (ADP-ribosylation factor-like protein 8A) is also named as ARL10B, GIE2 and belongs to the small GTPase superfamily. ARL8A is localized to lysosomes in mammalian cells (PMID: 16537643). In neurons, ARL8A mediates the anterograde axonal long-range transport of presynaptic lysosome-related vesicles that are required for presynaptic biogenesis and synaptic function. ARL8A is upregulated in many cancers such as endometrial cancer (PMID: 32070877), colorectal cancer (PMID: 30546056) and inflammatory breast cancer (PMID: 27648361), and has been associated with poor survival outcomes. ARL8A/ARL8B can be recognized by this antibody.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 68186-1-Ig (ARL8A/ARL8B antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control. This data was developed using the same antibody clone with 68186-1-PBS in a different storage buffer formulation.
