Background Information

CAMP is a member of an antimicrobial peptide family, characterized by a highly conserved N-terminal signal peptide containing a cathelin domain and a structurally variable cationic antimicrobial peptide, which is produced by extracellular proteolysis from the C-terminus. In addition to its antibacterial, antifungal, and antiviral activities, the encoded protein functions in cell chemotaxis, immune mediator induction, and inflammatory response regulation. CAMP encodes the 18-kDa proprotein hCAP18. FALL-39 and LL-37 are the mature cathelicidin peptides. This antibody can recognize all the proprotein and cleaved species.

Selected Validation Data

human saliva were subjected to SDS PAGE followed by western blot with 82940-1-RR (CAMP antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

mouse lung tissue were subjected to SDS PAGE followed by western blot with 82940-1-RR (CAMP antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLL) kinetic assays of 82940-1-RR against Human ADAMDEC 1 were performed. The affinity constant is 98.4 pM.
