Background Information

The sodium voltage-gated channel beta subunit 3 (SCN3B) plays a crucial role in electrically excitable cells and conduction tissue in the heart. Some previous studies have established that genetic modification in sodium voltage-channel genes encoding for the cardiac β -subunits, such as SCN1B, SCN2B, SCN3B and SCN4B, can result in atrial fibrillation (AF). Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 82959-1-RR (SCN3B antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 82959-1-RR against Human SCN3B were performed. The affinity constant is 0.429 nM.
