Background Information

GAPDHS (Glyceraldehyde-3-phosphate dehydrogenase, testis-specific) is also named as GAPD2, GAPDH2, GAPDS and belongs to the glyceraldehyde-3-phosphate dehydrogenase family. It may play an important role in regulating the switch between different pathways for energy production during spermiogenesis and in the spermatozoon. GAPDHS is a promising contraceptive target because it is specific to male germ cells, essential for sperm motility and male fertility, and well suited to pharmacological inhibition (PMID:20828617).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 83290-3-RR (GAPDH antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 83290-3-RR against Human GAPDH were performed. The affinity constant is below 1 pM.
