Background Information

SEMA3A (Semaphorin 3A), a class-3 semaphorin signaling protein, is involved in cell signaling with PlexinA1 and Neuropilin-1 (NRP1) receptors and it is responsible for recruiting dendritic cells into lymphatics. It's widely expressed in different tissues (PMID:10766232). SEMA3A has been shown to exert osteoprotective effects, characterized by increasing bone formation while inhibiting the activation of osteoclast precursor cells (PMID:36598593). However, SEMA3A also modulates the immune system. SEMA3A expression in a myocardial infarct area enhances macrophage polarization and inhibits monocyte migration into the lesion area (PMID:28540528).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 83579-5-RR (SEMA3A antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 83579-5-RR against Human SEMA3A were performed. The affinity constant is 0.228 nM.
