## Background Information

Cullin-RING-based BCR (BTB-CUL3-RBX1) E3 ligase are the largest family of ubiquitin ligases which mediate the ubiquitination and subsequent proteasomal degradation of target proteins. One of seven cullin proteins serves as a scaffold protein for the assembly of the multisubunit ubiquitin ligase complex. CUL3 (Cullin-3) ubiquitin ligase complex targets multiple substrate for ubiquitination including cyclin E and of cyclin D1. Defects in CUL3 are the cause of Pseudohypaldosteronism type 2E (PHA2E) characterized by severe hypertension, hyperkalemia, hyperchloremia, hyperchloremic metabolic acidosis, and correction of physiologic abnormalities by thiazide diuretics.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 83619-5-RR (CUL3 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 83619-5-RR against Human CUL3 were performed. The affinity constant is below 1 pM.
