Background Information

GABARAPL1 (GABARAP-like protein 1), also named ATG8, GEC1, APG8L, ATG8L, and APG8-LIKE, is a member of the GABARP (GABAA receptor-associated protein) family. GABARAPL1 was initially identified as an estrogen-regulated gene and the protein acts in receptor and vesicle transport. It's also involved in the process of autophagy like GABARAP and GABARAPL2 and may be considered as an autophagic marker. It is expressed at very high levels in the brain, heart, peripheral blood leukocytes, liver, kidney, placenta, and skeletal muscle and at very low levels in the thymus and small intestine.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 83817-1-RR (ATG8L antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (4% PFA) fixed HepG2 cells using ATG8L antibody (83817-1-RR, Clone: 240533F5) at dilution of 1:200 and CoraLite®488-Conjugated Affini Pure Goat Anti-Rabbit IgG(H+L) (SA00013-2).
