Background Information

Phosphoprotein Enriched in Astrocytes 15 kDa (PEA15), also known as PED-15, is a small, death effector-domain (DED)-containing protein that was recently demonstrated to inhibit tumor necrosis factor- α -induced apoptosis and to reverse the inhibition of integrin activation due to H-Ras. PEA15 is a 15 kDa protein that is highly expressed in the nervous system with particularly high levels in astrocytes and neurons of the hippocampus. PEA15 is a cytoplasmic protein that sits at an important junction in intracellular signalling and can regulate diverse cellular processes, such as proliferation and apoptosis, dependent upon stimulation.
