Background Information

CD209 (DC-SIGN, CLEC4L) is a C-type lectin receptor that is involved in the innate immune system and recognizes numerous evolutionarily divergent pathogens, including bacteria, viruses, and parasites. CD209 is preferentially expressed on dendritic cells (DCs). It mediates transient adhesion of DCs with T cells. It has been reported that CD209 plays a role in capture and transmission of HIV from DC to T cells (PMID: 10721995).

Selected Validation Data

human placenta tissue was subjected to SDS PAGE followed by western blot with 84095-6-RR (CD209 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84095-6-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 84095-6-RR against Human CD209 were performed. The affinity constant is below 1 pM.
