Background Information

VDACs (Voltage Dependent Anion selective Channels), also known as mitochondrial porins, are a family of poreforming proteins discovered in the mitochondrial outer membrane. Mammals show a conserved genetic organization of the VDAC genes. It's reported that the amount of VDAC transcripts in liver is usually lower than in the other tissues. VDAC2 and especially VDAC3 are highly expressed in testis, while mouse VDAC1 is poorly expressed in this tissue. (PMID: 22020053)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 84225-2-RR (VDAC2 antibody) at dilution of 1:8000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84225-2-PBS in a different storage buffer formulation.
