Background Information

Neuronal cell adhesion molecule (NRCAM) is a member of the L1 subfamily of cell adhesion molecules (CAMs) that belong to the immunoglobulin superfamily (PMID: 11329126). NRCAM is a transmembrane protein composed of six Ig-like domains and five fibronectin type-III repeats in the extracellular region, with a highly conserved cytoplasmic tail. It is mainly expressed in the nervous system and is involved in neuron-neuron adhesion and $promotes\ directional\ signaling\ during\ axonal\ cone\ growth.\ NRCAM\ is\ also\ expressed\ outside\ the\ nervous\ system.$ Altered expression of NRCAM has been associated with tumor progression in diverse organs (PMID: 22182708).

Selected Validation Data

SH-SY5Y cells were subjected to SDS PAGE followed by western blot with 84690-1-RR (NRCAM antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Various lysates were subjected to SDS PAGE followed by western blot with 84690-1-RR (NRCAM antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 84690-1-RR against Human NRCAM were performed. The affinity constant is below 1 pM.
