For Research Use Only

Midkine Recombinant antibody

Catalog Number:84815-1-RR

Basic Information

Catalog Number: GenBank Accession Number: 84815-1-RR BC011704

BC011704 GeneID (NCBI):

CloneNo.: 241880H1

Purification Method:

Protein A purification

Size: 1000 µg/ml Source:

UNIPROT ID: Recommended Dilutions: P21741 IF/ICC 1:125-1:500

Rabbit P21741
Isotype: Full Name:

IgG midkine (neurite growth-promoting

Immunogen Catalog Number: factor 2)

AG24547 Calculated MW:

16 kDa

4192

Applications

Tested Applications: IF/ICC, ELISA

Positive Controls: IF/ICC : HeLa cells,

Species Specificity:

human

Background Information

Midkine is a heparin-binding growth factor identified over 20 years ago and enhances the survival, migration and many other activities of target cells. Midkine is rich in both basic amino acids and cysteine, and is not related to most other growth factors/cytokines. It is strongly expressed during embryonic periods, especially at the midgestation stage, and plays important roles in development, especially in neurogenesis. Midkine expression in adult tissue is generally weak or undetectable, and it is induced upon injury and exerts many activities related to tissue repair. The biological activities of midkine in malignant tumors include proliferation, angiogenesis, invasion and metastasis. Various cancers express significantly higher levels of the midkine protein in early stage tumor tissues than in adjacent normal tissue.

Storage

Storage:

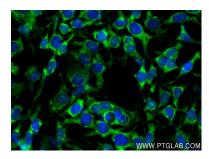

Store at -20°C. Stable for one year after shipment.

Storage Buffer

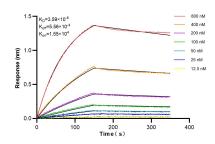

PBS with 0.02% sodium azide and 50% glycerol pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Immunofluorescent analysis of (-20°C Ethanol) fixed HeLa cells using Midkine antibody (84815-1-RR, Clone: 241880H1) at dilution of 1:250 and CoraLite®488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2).

Biolayer interferometry (BLL) kinetic assays of 84815-1-RR against Human Midkine were performed. The affinity constant is 35.9 nM.
