For Research Use Only

Phospho-Cardiac Troponin I (Ser23/24) Recombinant antibody, PBS Only

Catalog Number:85002-1-PBS

Basic Information

Catalog Number:

85002-1-PBS

Size: 1 mg/ml

Source: Rabbit Isotype:

IgG

GenBank Accession Number:

BC096165 GeneID (NCBI):

7137

UNIPROT ID: P19429 Full Name:

troponin I type 3 (cardiac)

Calculated MW: 210 aa, 24 kDa Observed MW: 26 kDa Purification Method: Protein A purfication

CloneNo.:

241982B1

Applications

Tested Applications: WB, Indirect ELISA Species Specificity:

human, mouse

Background Information

Cardiac Troponin I (cTnI) is produced by cardiac muscle. To date, most investigative effort in phosphorylation mediated regulation of cTnI function has focused on the actions of PKA and PKC. Evidence from studies in a variety of systems, ranging from reconstituted myofilament proteins to cultured myocytes or transgenic animals with heterologous expression of modified cTnI proteins, indicates that PKA-mediated functional effects (eg. decreased myofilament Ca2 sensitivity) are mediated principally through the phosphorylation of Ser22/23 (equivalent to Ser23/24, including the initiating Met, in the rodent sequence) within the unique N-terminal extension of cTnI. (PMID: 15514163)

Storage

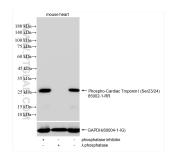

Storage:

Store at -80°C.

The product is shipped with ice packs. Upon receipt, store it immediately at -80°C $\,$

Storage Buffer: PBS Only

Selected Validation Data

Non-treated mouse heart tissue, phosphatase inhibitor treated mouse heart tissue and λ phosphatase treated mouse heart tissue were subjected to SDS PAGE followed by western blot with 85001-1-RR (Phospho-Cardiac Troponin I (Ser23/24) antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with GAPDH (60004-1-lg) antibody as a loading control. This data was developed using the same antibody clone with 85002-1-
