Background Information

Integrins are cell adhesion receptors that are heterodimers composed of non-covalently associated α and β subunits (PMID: 9779984). CD11b, also known as Integrin alpha M or CR3A, belongs to the integrin alpha chain family. CD11b forms an α / β heterodimer with CD18 (integrin $\beta 2$). CD11b/CD18 is implicated in various adhesive interactions of monocytes, macrophages and granulocytes as well as in mediating the uptake of complement-coated particles and pathogens (PMID: 9558116; 20008295). CD11b/CD18 is a receptor for the complement protein fragment iC3b, and is also a receptor for fibrinogen, factor X and ICAM1 (PMID: 2971974; 15485828).

Selected Validation Data

1x10⁶ mouse bone marrow cells were surface stained with 0.25 ug Biotin Anti-Mouse CD11b (M1/70) Rat IgG2a RecAb (Biotin-65672, Clone: M1/70) and Streptavidin-PE Conjugate (PE-PF00030), or unstained. Cells were co-stained with APC Anti-Mouse Ly-6G/Ly-6C. Cells were not fixed.
