Background Information

 ${\tt CD8}\ is\ a\ transmembrane\ glycoprotein\ composed\ of\ two\ disulfide-linked\ chains.\ It\ can\ be\ present\ as\ a\ homodimer\ of\ present\ constant and\ constant\ constant$ CD8 α or as a heterodimer of CD8 α and CD8 β (PMID: 3264320; 8253791). CD8 is found on most thymocytes. The majority of class I-restricted T cells express mostly the CD8 α β heterodimer while CD8 α α homodimers alone have been found on some gut intraepithelial T cells , on some T cell receptor (TCR) γ δ T cells and on NK cells (PMID: 2111591; 1831127; 8420975). CD8 acts as a co-receptor that binds to MHC class-I and participates in cytotoxic T cell activation (PMID: 8499079). During T cell development, CD8 is required for positive selection of CD4-/CD8+T cells (PMID: 1968084).
