Background Information

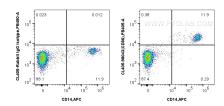

CD86 (also known as B7-2) is a costimulatory molecule belonging to the immunoglobulin superfamily. Primarily expressed on antigen-presenting cells (APCs), including B cells, dendritic cells, and macrophages, CD86 is the ligand for two proteins at the cell surface of T cells, CD28 antigen and CTLA-4. Binding of CD86 with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of CD86 with CTLA-4 negatively regulates T-cell activation and diminishes the immune response. Selected Validation Data

1x10^6 human PBMCs were surface stained with APC Anti-Human CD14 and 5 ul CoraLite® Plus 405 Anti-Human CD86 Rabbit Recombinant Antibody (CL405-98043, Clone: 240429C6) or Isotype Control. Cells were incubated with FC Receptor Block prior to staining. Cells were not fixed.
