Background Information

LRP2, also named as gp330 and Megalin, belongs to the LDLR family. It acts together with cubilin to mediate HDL endocytosis. LRP2 may participate in regulation of parathyroid-hormone and para-thyroid-hormone-related protein release. Defects in LRP2 are the cause of Donnai-Barrow syndrome (DBS). This antibody is specific to LRP2 and detects endogenous LRP2 with an apparent molecular weight 280 kDa, which is smaller than the predicted molecular weight (522 kDa) and probably represent a proteolytic fragment of the large glycoprotein (PMID: 16638803; 8483924).
