Background Information

Storage
Storage:

Integrins are cell adhesion receptors that are heterodimers composed of non-covalently associated a and $\beta$ subunits (PMID: 9779984). CD11c, also known as integrin a X, is a type I transmembrane glycoprotein present on a variety of cells, including monocytes/macrophages, granulocytes, a subset of B cells, NK cells and dendritic cells (PMID: 2897326; 1680915; 1694698; 17389580). As a result of its high level of expression on most dendritic cells, CD11c is typically considered to be a marker of conventional dendritic cells (PMID: 27119555). CD11c forms an $\alpha / \beta$ heterodimer with CD18 (integrin $\beta$ 2). CD11c/CD18 acts a receptor for fibrinogen and is important in monocyte adhesion and chemotaxis (PMID: 1671533).

Store at $2-8^{\circ} \mathrm{C}$. Avoid exposure to light. Stable for one year after shipment.
Storage Buffer:
PBS with $0.09 \%$ sodium azide and $0.5 \%$ BSA.
