**Background Information** 

Angiomotin like 2 (AMOTL2) is a member of the motin family of angiostatin binding proteins. The motin family, also known as AMOTs, consists of three members: AMOT, AMOT-like 1 (AMOTL1) and AMOTL2. Members of the motin family are a type of adaptor proteins mainly distributed in the cytomembrane, cytoplasm or nucleus, and have a higher expression in the endothelial cells of capillaries and in larger vessels of the placenta. Human AmotL2 encodes two isoforms of a molecular mass of 100 kDa and 60 kDa.(PMID: 34036399,PMID: 25080976)
