# CoraLite®594-conjugated C1OBP Polyclonal antibody 

## Catalog Number:CL594-24474 Featured Product

| Basic Information | Catalog Number: | GenBank Accession Number: | Purification Method: |
| :--- | :--- | :--- | :--- |
|  | CL594-24474 | BCO13731 | Antigen affinity purification |
|  | Size: | GeneID (NCBI): | Recommended Dilutions: |
|  | $1000 \mu \mathrm{~g} / \mathrm{ml}$ | UNIPROT ID: | IF 1:50-1:500 |
|  | Source: | Q07021 | Excitation/Emission maxima |
|  | Rabbit | Full Name: | avelengths: |
|  | Isotype: | complement component 1, q |  |
|  | IgG | subcomponent binding protein |  |
|  | Immunogen Catalog Number: | Calculated MW: |  |
|  | AG19773 | 282 aa, 31 kDa |  |
|  |  | Observed MW: |  |
|  |  | 32 kDa |  |

## Applications

## Tested Applications:

IF/ICC
Species Specificity:
human, mouse, rat

## Background Information

C1OBP, also named as gC 1 q receptor ( gC 1 qR ), p32, p33, and hyaluronan-binding protein 1 (HABP1), is a protein initially copurified with splicing factor SF2 (PMID: 1830244). The protein is synthesized as a pro-protein of 282 amino acids (aa) that is post-translationally processed by removal of the initial 73 aa to a mature protein of 209 aa (PMID: 8262387). C10BP is an evolutionary conserved and ubiquitously expressed multifunctional protein and has been reported to be a predominantly mitochondrial matrix protein involved in inflammation and infection processes, mitochondrial ribosome biogenesis, regulation of apoptosis and nuclear transcription, and pre-mRNA splicing (PMID: 28942965).

## Storage

Storage:
Store at $-20^{\circ} \mathrm{C}$. Avoid exposure to light.
Storage Buffer:
PBS with $50 \%$ Glycerol, $0.05 \%$ Proclin300, $0.5 \%$ BSA, pH 7.3 .
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage
$\overline{\text { Selected Validation Data }}$

Immunofluorescent analysis of (4\% PFA) fixed NIH/3T3 cells using CoraLite®594 C1OBP antibody
(CL594-24474) at dilution of 1:200.
