Background Information

CD27 (also known as TNFRSF7) is a type I glycoprotein expressed on some B cells and the majority of T cells, and is a member of the tumor necrosis factor (TNF) receptor family. CD27 is required for generation and long-term maintenance of T cell immunity (PMID: 11062504). It is a receptor for CD70 (CD27L). Ligation of CD27 by CD70 induces strong ubiquitination of TRAF and the activation of both canonical and non-canonical NF-kappaB pathways, as well as the JNK pathway (PMID: 19426224). CD27 may also play a role in apoptosis through association with SIVA1.

Selected Validation Data

1x10^6 human PBMCs were surface stained with CL750 Anti-Human CD19 and 5 ul CoraLite® Plus 594 Anti-Human CD27 (0323) (CL594-65132) or CoraLite® 594 Mouse IgG1 Isotype Control. Cells were not fixed. Lymphocytes were gated.
