Background Information

Pericentriolar material 1 (PCM1) is a component of centriolar satellites, which are electron dense granules scattered around centrosomes (PMID: 10579718). PCM1 is required for centrosome assembly and function. It acts as a scaffold to target several proteins to the centrosome in a dynein motor-dependent manner and regulate microtubular dynamics (PMID: 18762586; 12403812). It is also involved in the biogenesis of citia (PMID: 18772192). Chromosomal and the biogenesis of citia (PMID: 18772192) and the biogenesis of citia (PMID: 18772192).
