## **Background Information**

CD163, also known as M130, is a membrane glycoprotein that belongs to the scavenger receptor superfamily (PMID: 8370408). It is an acute phase-regulated and signal-inducing macrophage protein expressed exclusively in monocytes and tissue macrophages (PMID: 11196644). CD163 mediates endocytosis of haptoglobin-haemoglobin complexes (PMID: 11196644). The uptake of haptoglobin by macrophages contributes to the recycling of iron and also to the inflammatory response (PMID: 22900885). Soluble CD163 (sCD163), as a result of ectodomain shedding during inflammatory activation of macrophages, circulates in blood and has been suggested as a plasma/serum marker for macrophage activity (PMID: 12570164).

## **Selected Validation Data**

1x10^6 human PBMCs were surface stained with FITC Anti-Human CD14 and 5 ul Coralite® Plus 647 Anti-Human CD163 Rabbit Recombinant Antibody (CL647-65501, Clone:GHI/61) or Coralite® Plus 647-conjugated Rabbit 1gG control PolyAb (CL647-30000). Cells were not fixed. Cells were treated with FC Receptor Block prior to staining. Monocytes were gated.
