Background Information

CD155, also known as PVR, is a type I transmembrane glycoprotein in the immunoglobulin superfamily. It contains three extracellular immunoglobulin-like domains, D1-D3, of which D1 is recognized by the virus. Mature human CD155 consists of a 323 amino acid extracellular domain with one N-terminal V-type and two C2-type Ig-like domains, a 24 amino acid transmembrane segment, and a 50 amino acid cytoplasmic tail. CD155 is thought to play a role in adhesion by interaction with the ECM component vitronectin as well as a role in NK killing of tumor cells. CD155 binds to two receptors of NK cells, CD96 and CD226, and accumulates at cell-cell contact sites, leading to the formation of mature immune synapses between NK cells and target cells. CD155 serves as the entry receptor for poliovirus and thereby mediates human susceptibility to poliovirus infection.

Selected Validation Data

U-937 cells (positive) and Jurkat cells (negative) were mixed 1:1 and 1×10^6 cells were surface stained with 5 μ l CoraLite® Plus 750 Anti-Human CD155/PVR (CL750-65251, Clone: SKII.4) (red) or CoraLite® Plus 750 Mouse IgG1 Isotype Control (CL750-65124, Clone: MOPC-21) (blue). Cells were not fixed.
