| Background Informatio | There are five tubulins in human cells: alpha, beta, gamma, delta, and epsilon. Tubulins are conserved across species. They form heterodimers, which multimerize to form a microtubule filament. An alpha and beta tubulin heterodimer is the basic structural unit of microtubules. The heterodimer does not come apart once formed. The alpha and beta tubulins, which are each about 55 kDa MW, are homologous but not identical. Alpha tubulin is useful for scientists across fields as an internal control due to its high, ubiquitous expression pattern. | | | | | | |
| Storage | Storage: Store at -20°C. Avoid exposure to light. Stable for one year after shipment. Storage Buffer: PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3. | | | | | | |
| | Aliquoting is unnecessary for -20 | • | | | | | |

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with CL750-80762 (Alpha Tubulin antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.
