

# FITC-conjugated HBE1-Specific Monoclonal antibody

Catalog Number: **FITC-66151**

## Basic Information

Catalog Number:

**FITC-66151**

Size:

**500 µg/ml**

Source:

**Mouse**

Isotype:

**IgG1**

GenBank Accession Number:

**NM\_005330**

GeneID (NCBI):

**3046**

UNIPROT ID:

**P02100**

Full Name:

**hemoglobin, epsilon 1**

Observed MW:

**16 kDa**

Purification Method:

**Protein G purification**

CloneNo.:

**2C11G6**

Excitation/Emission maxima wavelengths:

**494 nm / 520 nm**

## Applications

Tested Applications:

**FC (Intra)**

Species Specificity:

**human**

## Background Information

The hemoglobin molecule is a tetramer consisting of two  $\alpha$ -globin-like polypeptide chains and two  $\beta$ -globin-like chains. The human hemoglobin genes are expressed in a tightly developmentally controlled fashion.  $\epsilon$ -globin (HBE1) is the predominantly expressed gene during the embryonic stage. The epsilon hemoglobin chain seems to be the best marker for fetal nucleated red blood cells (NRBCs). Anti-HBE1 may be used to label and isolate fetal cells from maternal blood and can be useful in prenatal diagnosis. This antibody specifically recognizes the HBE1 and doesn't cross-react with other globin chains. This antibody is conjugated with FITC.

## Storage

Storage:

Store at **-20°C**. Avoid exposure to light. Stable for one year after shipment.

Storage Buffer:

**PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.**

**Aliquoting is unnecessary for -20°C storage**

## Selected Validation Data

1X10<sup>6</sup> K-562 cells were intracellularly stained with 0.4 ug FITC Anti-Human HBE1-Specific (FITC-66151, Clone:2C11G6) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
