

IHC*easy* TYMP Ready-To-Use IHC Kit

Catalog Number: **KHC0926**

General Information

Sample type:
FFPE tissue
Cited sample type:
Reactivity:
Human
Cited Reactivity:

Assay type:
Immunohistochemistry
Primary antibody type:
Mouse Monoclonal
Secondary antibody type:
Polymer-HRP-Goat anti-Mouse

Kit Component

Component	Size	Concentration
Antigen Retrieval Buffer	100 mL	50×
Washing Buffer	100 mL ×2	20×
Blocking Buffer	5 mL	RTU
Primary Antibody	5 mL	RTU
Secondary Antibody	5 mL	RTU
Chromogen Component A	0.2 mL	RTU
Chromogen Component B	4 mL	RTU
Signal Enhancer	5 mL	RTU
Counter Staining Reagent	5 mL	RTU
Mounting Media	5 mL	RTU
Control Slide	1 slide (Optional)	FFPE
Datasheet	1 Copy	
Manual	1 Copy	

Storage Instructions

All the reagents are stored at 2-8°C. The kit is stable for 6 months from the date of receipt.

Background

Platelet derived endothelial cell growth factor (PD-ECGF), also known as thymidine phosphorylase (TYMP), induces migration and angiogenesis in endothelial and tumor cells, and was upregulated in various malignancies compared to that in normal tissues. Interestingly, PD-ECGF has dual effect on tumor development and chemotherapy. It could stimulate cancer cell migration and proliferation. On the other hand, some chemotherapeutic agents (5-fluorouracil, capecitabine, etc.) were converted to their active forms through TP enzymes.

Synonyms

ECGF1, Gliostatin, hPD ECGF, MNGIE, PD ECGF, PDECGF, PD-ECGF, TdRPase, thymidine phosphorylase, TP, TYMP

Selected Validation Data

Immunohistochemical analysis of paraffin-embedded human stomach cancer tissue slide using KHC0926 (TYMP IHC Kit).

Immunohistochemical analysis of paraffin-embedded human colon cancer tissue slide using KHC0926 (TYMP IHC Kit).

Immunohistochemical analysis of paraffin-embedded human renal cell carcinoma tissue slide using KHC0926 (TYMP IHC Kit).
